User Initiates Capture

- If the user decides to capture the hub, the CTA will change to indicate the progress toward the capture goal by percentage
- The color of the icons will change to indicate progress
- User may optionally ping the hub to have ask an in-world player to assist in the capture process, making the time-to-capture significantly faster

IntSpec_Capture Hub

User Captures Hub

- Once the hub is captured the devices within the hub are available for the user to select individually, OR they may access them from the main hub icon

IntSpec_Captured Hub

If User Doesn't want to capture the hub

- If the user doesn't want to capture the hub they can move the cursor away from the area and the hub POI and iconography will disappear
- The map will stay at the same zoom level to prevent a jarring or confusing effect if user moves cursor away
- User may zoom out/in or navigate away at will

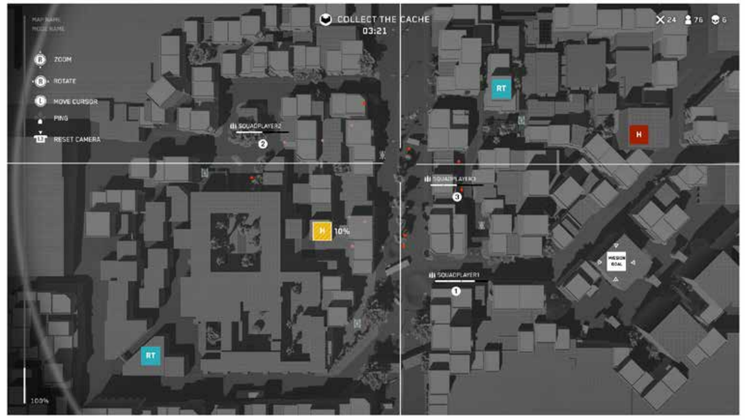

IntSpec > Hub PIP

User Moves cursor / Explores map while capturing

- the capture process will continue to take place regardless of the user's cursor staying on the hub within the map

IntSpec > Hub PIP

User Moves cursor / Explores map after capture

- Now that the devices are available to the user, the devices will appear on the map for the user to click into even if they do not have the main hub selected

IntSpec > Hub PIP
