User Operates Hub / Device

- When the user selects operate on the hub they will be taken to a device within the hub
- Users may navigate between devices within the hub via (L2/R2) or by pointing their current device at another device within the hub

Royale_Spectate_2

User Selects a different device

- by pointing their device at another device within the hub, the user may operate that device.
- Users will know another device is a part of the hub because there will be a visual indicator (such as a glow or outline) that will tell them, as well as a description
- When users select operate their perspective automatically changes to the device they selected to operate.
